

# ARC Training Classes Call For Schedule!!

## WHAT IS ARC FLASH?

Arc flash NFPA 70E is the standard that addresses electrical safety requirements for employees. It focuses on preventing death and injury from fire and burns. Main aim is to provide protection to workers based on the potential energy to which they could be exposed. It provides multiple methods by which the employer can calculate or estimate the hazard or risk. It covers electrical safety issues like safety related work practices, maintenance of electrical equipment / installations, and requirement of special equipment for electrical installation.

## WHY SHOULD YOU TAKE THE TRAINING?

Working with electricity is a high risk job. If you are an electrician, engineer or need to work directly with electricity, you ought to be aware of OSHA electrical safety regulations and making sure you comply with them. OSHA electrical safety has stringent standards that are specifically designed to protect you against electrocution, electric shock, explosions and fires. There are specific electrical standards for marine terminals, shipyards and general industries.

OSHA arc flash training focuses on the hazards that are generally associated with electrical equipment and installations and enables employees to minimize the risks.

## KEEPING YOU SAFE!

During OSHA arc flash training, you will learn about single and three phase electrical systems, ground fault circuit interrupters, grounding, fixed as well as cord-and-plug connected equipment, hazardous locations and safe work practices. OSHA inspection and recognizing electrical hazards are specially emphasized.

# ARC Training Class Details

## **BENEFITS OF OSHA TRAINING & OSHA COMPLIANCE TRAINING**

- ◆ Protect your employees from injury or illness
- ◆ Prevent or minimize loss of life at the work site
- ◆ Educate your employees about the importance of workplace safety and enable them to take responsibility for the safety of their coworkers
- ◆ Increase employee morale

## **KEY SERVICES BY OSHA COMPLIANCE TRAINING**

- ◆ Identifying potential hazards & other safety needs of your organization
- ◆ Suggesting viable solutions
- ◆ Recommending further assistance, if required
- ◆ Writing reports regarding the findings of on site health & safety reviews
- ◆ Helping to develop and maintain high standards of health & safety
- ◆ Conducting on site as well as off site training programs for owners and employees of small businesses
- ◆ Providing OSHA compliance training recognition through the Safety and Health Achievement Recognition Program (SHARP)
